SHIVANI VAIDYA

(206) 295 2163 | shivanivaidyaworkid@gmail.com | Santa Clara, CA

Software engineer turned product manager with 10+ years of experience in cloud, AI and distributed systems. Combines deep technical expertise with customer discovery and hands-on experience shipping AI products.

SKILLS

Product: Product Discovery, User Research, Product Strategy, MVP Definition, Cross-Functional Leadership
AI: LLMs, RAG, Agentic AI, Prompt Engineering, AI Personalization, Conversational AI, Vector Databases
Engineering: Python, Go, Java, SQL, REST APIs, Distributed Systems, AWS, GCP, Azure, Kubernetes, Snowflake
Tools: Figma, Cursor, Claude Code, Codex, Lovable, LiveKit, Temporal, n8n, Langfuse, Agent Skills (`SKILL.md`)

EDUCATION AND CERTIFICATIONS

- University of California, Davis — Master of Science in Computer Science, 2016
- Kellogg School of Management — Product Management Certificate, Dec 2025

WORK EXPERIENCE

Founding Product Manager, ZenAI.Coach — **Jun 2025 – Apr 2026**

- Led V2 of a conversational AI coaching journey, introducing voice, personalization and storytelling; journey completion more than doubled from 12% to 26% across early user cohorts.
- Shipped an AI-powered Digital Twin in under 10 days with one engineer, defining the MVP, APIs, data architecture and personalization logic in an implementation-ready specification.
- Owned product strategy and roadmap execution, using customer research to prioritize new coaching experiences and partnering with founders and engineering to launch them.
- Defined AI evals for the coaching journey and partnered with engineering to implement them in DeepEval, uncovering guardrail, context-retrieval and comprehension failures that drove product and prompt improvements.

Cloud Engineer, CrowdStrike — **Aug 2022 – May 2025**

- Led cross-functional development of a new AI security intelligence capability, building cloud asset ingestion services that powered customer-facing dashboards tracking AI adoption and security misconfigurations across AWS, GCP and Azure.
- Collaborated with two internal teams to reconcile competing latency, data freshness and security requirements, designing and building a shared asynchronous system in Go to retrieve serverless function code across AWS, Azure and GCP.

Senior Member of Technical Staff, Lacework — **Jan 2021 – May 2022**

- Proactively identified slow APIs through performance testing and optimized underlying Snowflake queries, cutting execution times by 50% or more for multiple queries and improving customer-facing dashboard responsiveness.

Java and Big Data Engineer, IO-Tahoe — **Dec 2018 – Apr 2020**

- Led on-site deployments and integrations for multiple enterprise customers, working directly with stakeholders to identify data discovery challenges, translate their needs into engineering requirements and coordinate solutions with internal teams.

ADDITIONAL EXPERIENCE: Condé Nast · Barclaycard · Open Networking Foundation · AppNexus · ClickFuel
